Professional Summary

Computer Science Engineer and aspiring Generative AI Analyst with a strong foundation in Python, SQL, and data visualization tools (Power BI, Streamlit). Experienced in developing Retrieval-Augmented Generation (RAG) architectures and building data-driven dashboards to automate reporting workflows and monitor operational metrics. Passionate about the intersection of AI and digital risk, with a keen interest in Responsible AI frameworks, data governance, and leveraging advanced analytics to mitigate technology risks and support fact-driven decision-making.

Technical Skills

AI & Emerging Tech: Generative AI, Retrieval-Augmented Generation (RAG), Vector Embeddings, LLMs, Responsible AI
Security & Analytics: Python, SQL, Data Governance, Threat Analytics, Automation, Cryptography (Basics)
Data Visualization & Tools: Power BI, Streamlit, Microsoft Excel, PowerPoint, DAX, Power Query
Frameworks & Knowledge: Information Security Principles, Third-Party Risk Management, SDLC, Agile
Currently Learning: NIST CSF 2.0, ISO 27001, ISC2 Certified in Cybersecurity (CC) preparation

Generative AI & Analytics Projects

VectoRAG – Generative AI Document System | *Python, LLMs, Vector Embeddings*

- Developed a document-grounded Retrieval-Augmented Generation (RAG) system designed to extract and synthesize academic resources.
- Implemented page-level traceability and data verification to ensure model output accuracy, aligning with core Responsible AI and data integrity principles.
- Engineered vector search pipelines and integrated local large language models to securely process text without exposing data to external APIs.

Risk & Performance Analytics Dashboard | *Power BI, SQL, Data Governance*

- Designed a scalable star-schema data architecture to process complex business datasets, establishing clear relationships for reporting and risk monitoring.
- Built interactive Power BI visualizations and automated reporting workflows to identify operational trends, anomalies, and potential digital risks.
- Conducted comprehensive data profiling and quality audits to ensure compliance with internal data governance and reporting accuracy standards.

Automated Data Processing Engine | *Excel, Python, ETL Workflows*

- Automated the cleaning and transformation of highly variable, large-scale datasets, standardizing mixed data formats into actionable insights.
- Utilized SQL and query optimization techniques to extract and analyze multidimensional data, accelerating the speed of compliance reporting.

Experience

Developer & Project Lead

KGISL Institute of Technology

2022 – Present

Coimbatore, Tamil Nadu

- Led the architectural design and development of software systems, utilizing tools like Mermaid and C4 component models for secure system design.
- Managed project workflows, documented technical requirements, and presented architectural findings to academic stakeholders.

Software Development Engineer Intern

Bluestock Fintech

Recent

Remote

- Contributed to software engineering in a highly regulated fintech environment, gaining exposure to financial data handling and technical risk considerations.

Education

KGISL Institute of Technology

Bachelor of Engineering in Computer Science and Engineering; CGPA: 7.86/10

Coimbatore, Tamil Nadu

2022 – 2026

Achievements & Specialized Training

- **AI & Security Research:** Presented research papers on AI-driven models and sustainability at the AICTE National Conference on Machine Learning (Aug 2025) and International Conference on SDGs (Nov 2024).
- **Analytical Problem Solving:** Competed in the CBIT Hacktoberfest Hackathon (Oct 2024), collaborating on data-driven technical solutions under strict time constraints.
- **Certifications:** HackerRank SQL (Basic) - Jul 2026.
